# The Problem

Covid-19 is the new normal, affecting everything from health to travel restrictions

Unable to travel overseas

Reduced interaction with others; more cooping up at home, hence people feel lonely

Local businesses and attractions are affected due to lack of visitors, especially for SMEs

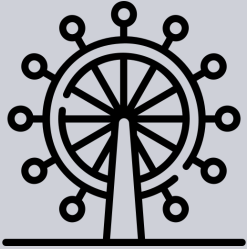

# Our Solution

## SGExplore! App

- Coded using React Native
- Pulls data from various Singapore tourism APIs (eg: yoursingapore.com)

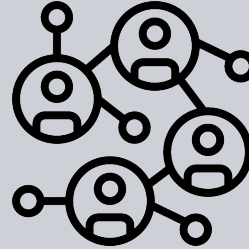

# Features

Provides details and ratings on various Singaporean attractions (eg: Botanic Gardens)

One stop app for all the details of the attraction you would like to go to

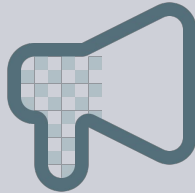

Easily link up and organize outings with friends

Track all the attractions you would like to head to through a travel list

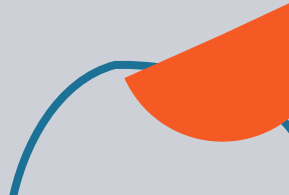

Get alerts of any recent occurrences at an attraction (eg: new covid cluster at Macritchie reservoir)

Informs the user of how crowded the attraction is (eg: there are 38 people at Bishan Park now). This will be provided by Data pull from government Safeentry sources

# How it solves problems

- Allows Singaporeans to keep safe through knowing about how crowded the attraction is and hence being able to decide if its safe to visit the attraction
  - Boosts local businesses by showing users many of these lesser known attractions in Singapore, hence attracting Singaporeans to visit these attractions
  - Satisfies the human desire for being in a group of people, as now Singaporeans can link up with their friends to visit attractions around Singapore
  - Allows Singaporeans to explore and learn about many different attractions in Singapore
- 

# Existing Solutions

visitsingapore.com

yoursingapore.com

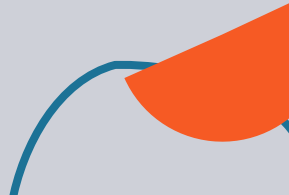

Google Maps

Compared to these current solutions, our app provides an all in one stop for exploring new attractions in Singapore, latest developments at the attraction (eg: new covid cluster found there), checking if the attraction is very crowded and much much more.

# Future Improvements

- We would love to add features such as:
    - Video integration: influencers can upload their videos directly to the app to showcase lesser known attractions in Singapore
    - Direct booking with locations (eg: directly book a ticket to a hotel in Singapore through the app)
- 

# Thanks
